

FOR SALE: Roll bar for C-4 convertible 1991 thru 1996.

Will not fit coupes. Bolt in or weld in, I had it bolted in, bolts to the original seat belt mounting point, you remove the stamped steel bracket and this uses existing bolts and bolt holes, the rear braces bolt to the frame, located about 3/4" below the fiberglass , so you do need to cut thru the glass and install nutserts in the steel frame. Front single brace is also bolted in and removable, bolts thru top hoop in center between seats and to passenger side frame behind speaker at passengers right foot. (Speaker needs to be removed to expose frame, no cutting here) it also bolts in their using nutserts.

Soft top is completely usable with bar installed. Rear deck lid does NOT need to be cut or modified in any way. Will **NOT** work with convertible hardtop installed.

Front single brace allows it to be legal in NCCC high speed events for a convertible in groups 1 & 2 which was my sole use for the front brace. Otherwise, I kept that off to allow passengers to be safely seated.

It is constructed of 1 - 3/4" mild steel .120 wall thickness and a very durable piece. It is also chrome plated for good looks.

Provisions on bar for seat belt mounting point for use of original equipment seat belts. This also can be used as a "harness bar" to mount 5-point harness to behind seats. It was originally built by RD_racing in Missouri and sold as an: **"S/T Frame Support"**.

Located in St. Louis, MO. shipping would be tough, can work with people to arrange delivery at NCCC events or meetings. More photos available upon request.

-Price is \$400 or reasonable offer.
